

WeekReport_2018-01-21_02-24_E

Week Overview

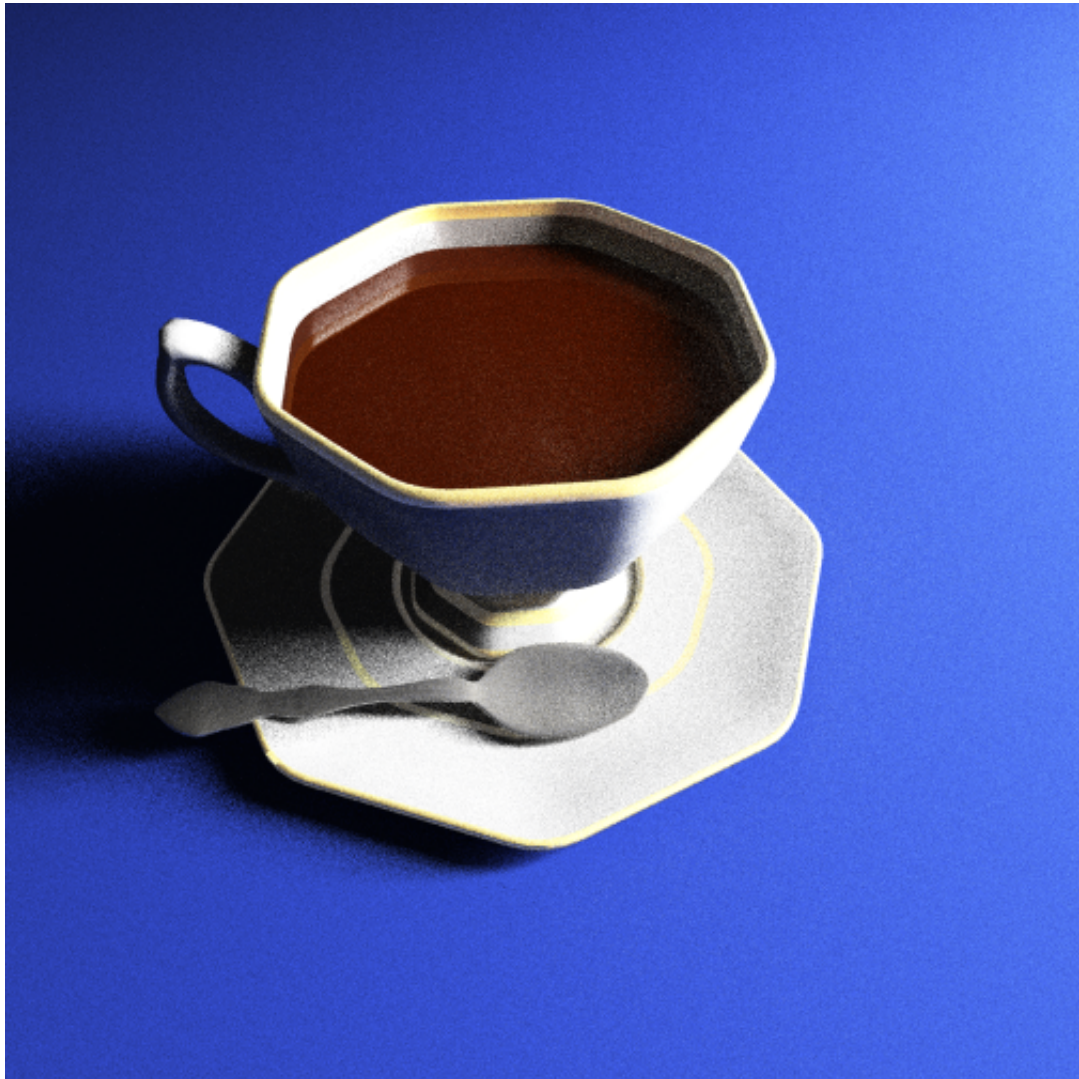

- this week I think I have done a lot of things but I think it is not enough. our project still has lots of things to do

Project: data2video

- Earlier this week, I mainly tried some data mining according to Lu.
- Then after several difficult paper readings and discussions with the seniors, the general direction was finally determined at the weekend.
- But the details still have a lot to discuss
- The main idea is to first convert the data into various scatter plots, then extract the pattern, then select the more significant patterns, and then build the graph and walk around randomly.

Rendering Course

- I finish the monte carlo ray tracer and the report

Project: GraphLayout

- We plan to change the code to the GPU version, but recently there really is no time.

Short-term perspective

Work	deadline	Tip
write the first version of the data extract	Thu	data2video

Long-term perspective

Work	deadline	Tip or Progress
data2video	19.03.31	
GraphLayout	None...	modify the GPU
